

Software Quality Engineer Job Description

Compensation: TBD with experience

edō Interactive, Inc., an innovative, start-up company developing products for consumer financial services and retail marketing, is seeking a talented Software Quality Engineer that can be a strong individual contributor and team member to join the team developing edō's marketing and digital incentives platforms.

Job Description:

Be a member of our development team ensuring the quality and performance of edō's SOA software platforms. This includes working with our product managers, software developers and IT staff to assist in designing and building new application test suites, test plans as well as performance testing plans.

This position will report to the VP of Product Engineering and work closely with product owners and external technology partners.

Job Responsibilities:

- Design test plans, scenarios, scripts, or procedures
- Document test procedures to ensure replicability and compliance with standards
- Design or develop automated testing suites
- Develop testing programs that address areas such as database impacts, software scenarios, regression testing, negative testing, error or bug retests, or usability
- Create or maintain databases of known test defects
- Implement standards, methods and procedures to determine product release readiness
- Document software defects and report defects to software developers
- Monitor bug resolution efforts and track successes
- Evaluate or recommend software for testing and/or bug tracking
- Install, maintain, or use software testing programs
- Investigate customer problems referred by technical support
- Participate in product design reviews to provide input on functional requirements, product designs, schedules, or potential problems
- Review software documentation to ensure technical accuracy, compliance, or completeness, or to mitigate risks

Desired Technical Experience:

- BS in computer science or related field.
- 2-5 years of automating software testing in a team environment
- 2-5 years of manual software planing and testing
- 2+ years of hands-on experience with open-source automated testing tools (unit and integration)
- Familiarity with Agile software methodologies (SCRUM)

- Experience with the following tools:
 - Java
 - Axis2
 - Spring Framework
 - Hudson or other Continuous Integration servers
 - Subversion
 - Fit/Fitnesse
 - Red Hat/Cent OS Linux
 - JMeter
 - Python or Ruby Scripting (*preferred*)
 - Liquibase (*preferred*)
- Work in a self-directed manner in new or loosely-defined situations.
- Excellent written and verbal communication skills.
- Works well in a distributed team environment
